To dear

My name is Chernet Markos. I was born from my father Mr. Markos and my mother Mrs Felekechidede^{se} am 14 years old. I am attending my Studies in Weramo primary school This year. I am grade 6. My School Subjects are English, Mathematics, Amharic, Basic Integrated Science, Social Studies, Civics and Ethical education, Hadiyisa (which is the local and vernacular language) and sport. My favourite Subjects are English and Mathematics. After Completion of my Studies, I want to be a doctor because I want to help patients Suffered from different diseases. My future goal is to Support my Country to eradicate poverty and illiteracy and to Support my Family economically.

In addition, I want to tell about my school major problems. I considered the following problems when I study in the school. In my school, the total number of students are 1600 but the classes in the school are only 4. As a result, our students are unable to study properly because 1600 students need extra classes. Another major problem is a toilet. We don't have a toilet to use in the school. The school might need a male and female toilets for students separately. Likewise, one toilet is in the school. Another major problem is the school has no fence. The kindergarten students has no playing tools in the school. This affects the learning of our students in the school. Still another problem in my school is shortage of desks for our school students with regard to the number of students. There is also shortage of reference books and Guidances for our students to study.

Best Regards

Chernet Markos
